Projects

iBet Live | Github
Application that uses real sportsbook odds to make bets using virtual money on different sports games and events
- Uses AngularJS to make calls to APIs to display various odds and betting data in a single page application
- Handles user sessions and stores user bets using PHP and MySQL on the backend

Tic Tac Remix Live | Github
Tic Tac Toe featuring music trivia, an audio visualizer, and a gameboard that ranges from 3x3 to 20x20 tiles
- Utilizes HTML5 to create the basic structure of the website and CSS3 to add styling and animations
- Game and presentation logic handled by Javascript and jQuery to interact with DOM, track correct answers for trivia, handle music layering, determine win conditions, and manage general game states

MBoutique Live | Github
Re-creation of a website for a baking goods store
- Basic skeleton created with HTML5, PHP, and pixel perfect placement of images and styling made with CSS3
- Media queries utilized to make pages responsive and viewable on mobile screens

Pomodoro Timer Live | Github
Pomodoro technique timer web application to help with productivity
- Design created with HTML5 and CSS3 compiled from SCSS and gulp.js
- Timer countdown and logic controlled by event handlers through Javascript and jQuery

Personal

Huge sports fan, especially basketball. Love my LA teams. Also have a broad interest in a wide variety of things such as movies, music, pop culture, politics, psychology, economics, etc. Just an avid learner and curious about the world in general. I like having my brain feel stimulated!
